(P09)**

FOR SALE: 2024 Aries Grout System, available for quick delivery. "I and I" reduction in municipal infrastructure refers to efforts to reduce Inflow and Infiltration in sewer systems. Inflow (I) is the water that enters the system from sources like rainwater or runoff, and Infiltration (I) is water that seeps into pipes through cracks, joints, or other openings. Reducing I and I is important because it can overload wastewater treatment plants and increase the risk of sewer overflows. Municipalities often implement various strategies to reduce I and I, such as repairing damaged pipes, maintaining sewer infrastructure, and implementing stormwater management practices to minimize excess water entering the system. These efforts help improve the efficiency and reliability of sewage systems and reduce the environmental and financial costs associated with excessive I and I. Contact JD Brule sales team for more info. Production available and delivery as early as July 2024. **Adam Russell - 613-293-1965 - adam@jdbrule.com. Ottawa, ON (P09)**
